Backend-focused software engineer with experience building scalable web applications using Next.js, Node.js, Express.js, Laravel, and REST APIs. Experienced in developing SaaS platforms, integrating payment gateways, and designing multi-tenant architectures

Work Experiences

PT. Foom Lab Global - Jakarta Selatan, Indonesia

Jan 2026 - Present

Software Engineer

- Refactored and streamlined an internal application to enforce a single source of truth for data, eliminating legacy bloat and redundancy, resulting in a 50% reduction in storage usage and improved system maintainability and performance.
- Designed and developed a custom B2C e-commerce platform to fully replace a Shopify-backed website, implementing end-to-end features including secure payment gateway integration, shipment and logistics handling, voucher and promotion systems, and order management using Next.JS, Node.JS, and Postgres.
- Led the integration for customer side Flutter application with CRM third party software Moengage.
- Built RESTful APIs for payments, inventory, and shipping, including third-party integrations with Odoo and Jubelio
- Developed the company's community Odoo application, contributing custom features and integrations to support new company operational workflows.

PT. Aero Systems Indonesia - Tangerang, Indonesia

Jun 2025 - Dec 2025

Software Engineer Intern

- Designed and optimized database schemas to support new automation features, including email-based ticket closing and real time alert integration, ensuring data consistency and faster query performance.
- Automated incident reporting workflows by integrating Elang Aero Systems alert system, enabling real time ticket creation from server alerts via JSON payload and mapping templates
- Improved service transparency and decision-making by redesigning dashboard visualizations (pie charts, bar charts, line graphs) to display real-time ticket insights by category, service, and priority.
- Standardized multi-company reporting by embedding company-based filters across all ticket reports, ensuring only relevant client data was visible.

Meraki (Freelance) - Semarang, Indonesia

Jan 2024 - Present

Backend Engineer

- Led the backend for a production ready accounting system for a client needing to track their expenses within the organization.
- Implemented accounting logic of credit and debit into the system to automize company finance calculations.
- Designed and implemented a comprehensive information system for the Senate of the Law Faculty at Universitas Diponegoro using Laravel.

PT. Telunjuk Komputasi Indonesia

Aug 2023 - Feb 2024

Software Product Development Intern

- Led development of a custom CMS for a major client with a team of 3, enabling easier content updates and administrative control, significantly reducing reliance on developer intervention.
- Built secure client access platform using Laravel to authenticate users and present personalized dashboards in Google Looker Studio, improving client engagement and report access speed.

Education Level

Universitas Diponegoro - Semarang, Indonesia

Aug 2021 - Aug 2025

Bachelor of Computer Engineering

- Cumlaude Graduate

The University of Sydney - Sydney, Australia

Jul 2024 - Dec 2024

Study Abroad Program

- Fully funded IISMA scholarship program by KEMENDIKBUDRISTEK
